Assignment on Code Generation

The purpose of this exercise is to understand how to automatically generate code.

- Use the DSL from the last assignment (Wizards)

- Write Acceleo templates, which generate valid Java code for programs written using the integrated DSL.

- Please, revise the sample provided to create a simple wizard in Java.

Create a zip/rar file containing the following artefacts, and submit it via Moodle by **November 13rd**:

- EMF project, including an instance of the meta-model
- Acceleo project with model to text templates

We will evaluate that both templates and the generated code is well structured, valid, and executable.

Please, do not forget to Include any file need to run the resulting code.
